

## Preschool Fire Safety Theme Science Activities-- for your Preschool Scientists in Training!

### PAINT BAGS

Materials Needed: ziplock plastic baggies (sandwich size), red and yellow paint, clear packing tape.

In advance, place a few teaspoons of red paint and a few teaspoons of yellow paint in several baggies, without mixing the paint.

Seal the bags and then tape them shut so that no paint can leak out.

Place these baggies in the Science area for the children to experiment with. As they mix with their hands, they'll make orange!

VARIATION: I have also taped the edges of the baggies to the table so that the children only use their finger tips to press on the baggies, print their names, etc.

EXTENSION: Add other colors for the children to mix and become color scientists with!
